

EveryCoinCounts

Giving institutions and non-profit organizations the ability to receive donations in crypto, and spend it for their causes.

Problem

Institutions and non-profit organizations can't receive donations in crypto and spend it for their causes in a supervised manner and donators can supervise the spends of the institutions.

Solution

An open source code to support institutions and non-profit organizations to do good and help important causes providing access to the Web3 space. A blockchain solution that also offers a safe platform for donators to contribute with serious projects that impacts people's life and can change histories.

Areas

- Education
- Homeless
- HIV/AIDS
- Disability
- Adolescents
- Animals
- More...

How

Using smart contract deployed on the most relevant networks like Ethereum and Polygon, we use oracles to verify entities credibility, offer crypto custody to institutions, and track the use of the founds raised.

Partner

We rely on UMA Oracle as our decentralized truth machine regulated by their community to validate institutions so donators can be sure that their contributions are spent appropriately and supporting the right causes.
